

## New Ballistic Elevation Turret for Hunting and Competition Shooting: Single Turn II-Ballistic

The 3-21x50 Exos and a wide range of our PM II products can now be ordered or upgraded with the new Single Turn II-Ballistic (ST II-B). The ST II-B is the fastest, most flexible and most precise bullet drop compensation (BDC) on the market. It enables the shooter to calibrate the turret to the ballistic of the rifle and to stay on target in any situation.

The ST II-B is the extended version of the Single Turn II (ST II) turret. With the help of six, clearly visible position indicators (1-6), the operator can easily set-up their own calibrated turret according to the ballistic of the rifle. The position indicator can be placed at any position on the turret according to the ballistic coefficient. A unique advantage: it is also possible to use an interchangeable bullet-compensating turret cap which matches the modified ballistic of the rifle. This is the case when using different types of ammunition, interchangeable barrels or shooting with nightvision or a silencer.

The position indicators can be individually adjusted to any distance, such as 100 to 600 m/yards. They can be moved on the outside of the turret and fixed at any position. The quantity of position indicators used can be freely selected. Additional position indicators can be purchased at any time.

A Mode Lever locks or unlocks the turret. A visual indicator below the turret indicates the 'locked' position with the color red and the 'unlocked' position with the color green. The ST II-B turret gives the user the fastest and most precise turret dialing solution and allows to stay on the target in any situation.

## About Schmidt & Bender

Schmidt & Bender has maintained a long track record as a pioneer in Quality and Precision, as well as Tradition and Innovation. These are synonyms for a company with a global name for ultra-high-quality riflescopes. We believe it is only those companies who determine to set themselves challenges that will experience the successful performance levels that only elite quality development and production can achieve. Time after time, Schmidt & Bender measures itself against the best in the sector of the industry – and we do so very successfully. The overarching goal of our design and development work is to achieve our uncompromising quality targets. The manifest outcome is that we meet the highest standards of quality in all categories of rifle scope development: riflescopes that set new technical standards and precision devices that impressively demonstrate our philosophy, 'Precision Makes the Difference'!
