

THE NEW BDC II-B TURRET

**SIMPLE
PRECISE
FLEXIBLE**

WHY DO I NEED THE NEW BULLET DROP COMPENSATION II-BALLISTIC (BDC II-B)?

- Turret can easily be calibrated to the ballistic of your rifle
- Allows the shooter to “stay on target” at varying distances
- Bullet-compensating turret cap can be swapped out: perfect for interchangeable barrels
- Very flexible but still with utmost precision
- All parts are made of solid aluminium
- Turret and position indicators are easy to read
- No need for non-durable stickers or self-made markings

Interchangeable Turret Cap

Holding Screw

Position Indikator

Mode Lever

Simple, precise and flexible: Bullet Drop Compensation II-Ballistic

The BDC II-B allows the operator to easily set-up their own calibrated turret according to the ballistic of the rifle. The BDC II-B turret provides 6 position indicators marked 1-6 which indicates 100 m/yd-600 m/yd. The position indicator can be placed at any position on the turret according to the ballistic coefficient. When using a silencer or interchangeable barrels, the position indicators are easy to adjust to the given environment-conditions. Best of all: in the latter case it is also possible to use an interchangeable turret cap which matches the modified ballistic of the rifle. A Mode Lever locks or unlocks the turret. The BDC II-B - as well as the ST II-B - gives the hunter the fastest and most precise turret dialing solution. It's simply precise and flexible.
